

Computational Mathematics/Information Technology

Worksheet 2

Additional Instructions

The instructions on the sheet work for Windows 2003 and earlier. The version in the laboratories is Windows 2007. To get into the Visual Basic editor the instructions in Task 2 no longer work. Instead follow the instructions below:

- Click on the circle symbol in the top left corner

- A menu should come up with an “**Excel options**” button at the bottom. Click on this.
- Check the box “**Show Developer tab in the Ribbon**” and click **OK**.
- Click on the **Developer** tab in the Ribbon
- Click on the Visual Basic icon at the left

You should now be able to rejoin the previous instructions

- **Insert** from the top menu
- Select **Module 1** and you should be able to start editing your Visual Basic

For access to the iteration controls (task 8)

- Click on the circle symbol in the top left corner

- A menu should come up with an “**Excel options**” button at the bottom. Click on this.
- Click on the “**Formulas**” and check the “**enable iterative calculations**” box. Adjust max number of iterations if required.
- Click **OK**.
